Flow Controls

Section introduction

This section gives basic specifications for the complete line of Vickers screw-in cartridge flow control valves. Its purpose is to provide a quick, convenient reference tool when choosing Vickers cartridge valves or designing a system using these components.

Valve Features and Benefits

Eaton offers a complete range of Vickers flow controls cartridge valves, with a variety of features, including:

- Products in this catalog have been Fatigue tested to one million cycles at 132% or 10 million cycles at 115% of rated pressure.
- Non-adjustable, pressure compensated, flow regulator for flows to 227 L/min (60 USgpm).
- Adjustable, pressure compensated, flow regulator for flows to 114 L/min (30 USgpm).
- Fixed and adjustable priority bypass type flow regulator for regulated flows to 114 L/min (30 USgpm).
- Adjustable flow control without free reverse flow check with flows rated to 114 L/min (30 gpm).
- Adjustable flow control with free reverse flow check with flows rated to 45 L/min (12 gpm).
- Needle valves with flows rated to 265 L/min (70 USgpm).
- Velocity fuses with flows rated to 227 L/min (60 USgpm).

- Flow divider/combiners (FDC1) with flows rated to 568 L/min (150 USgpm).
- Posi-traction valves (FDC3) with flows rated to 567 L/min (150 USgpm)
- Operating pressures to 350 bar (5000 psi).

Here are some of the benefits of Vickers flow controls:

- All operating parts are hardened steel, ground and honed for long life and low leakage.
- Designed for maximum flexibility and minimal space requirements.
- All exposed cartridge surfaces are zinc dichromate plated to resist corrosion. Steel housings are available for cartridges rated to 350 bar (5000 psi) application pressures.
- All aluminum manifolds are gold anodized to resist corrosion.
- Reliable, economical and compact.
- Low leakage.
- Variety of adjustment options.
- Adjustments designed not to go spring solid at "full in" position or to allow the adjustment to be removed when backed out.

Notable are the two styles of flow divider/combiner:

FDC1-**

The FDC1-** is a cartridge type hydraulic flow divider-combiner valve. It divides and combines flow, regardless of system load or pressure, proportionally per specified flow division.

For example: FDC1-10*-66 will divide an incoming flow of 45 L/min (12 USgpm) equally out each port with an accuracy of 10% each side. With 45 L/min (12 USgpm) in at "3" port, flow out port "4" can be 22 L/min (6 USgpm) 4,5 L/min (1.2 USgpm) while flow at port "2" is 22,7 L/min (6 USgpm) 4,5 L/min (1.2 USgpm).

The combining accuracy is the same with incoming flow at port "4" and "2" and flow out port "3" of 45 L/min (12 USgpm). Inlet flow at port "4" will be 22 L/min (6 USgpm) 4,5 L/min (1.2 USgpm). Inlet flow at port "2" will be 22 L/min (6 USgpm) 4,5 L/min (1.2 USgpm).

Flow division or combining will be maintained even if unequal loads are placed on ports "4" and "2".

A special feature of the FDC1-** is that it provides rephase flow to either port 2 or port 4 when one of the two is blocked. This feature is useful in hydraulic circuits that require cylinders to move at the same time. If one cylinder bottoms out first, the opposite cylinder is provided with "rephase" flow to allow the cylinder to bottom and start the cylinders together for movement in the opposite direction.

FDC3-**

The FDC3-** is a cartridge type positive traction valve that divides and combines flow, regardless of system load or pressure, proportionally per specified flow division.

This valve is used in place of a standard flow divider-combiner in systems where hydraulic motors are used as drive wheels on each side of the machine. The positive traction valve acts much like a standard flow divider-combiner as the vehicle travels in a straight line. Equal amounts of flow go to each "C" port. As the vehicle turns a corner, a standard flow divider will maintain equal flow to each drive motor. On a turn, it is necessary for the outer wheel to turn faster than the inner wheel. A standard flow divider-combiner will provide equal flow to each motor causing the drive motors to skid. The positive traction valve solves this problem by allowing the one motor to turn faster than the other.

This operates in a similar way as a mechanical differential on an automobile. In a turn, the inside drive motor is restricted and builds up pressure, while the outside drive motor is without restriction. Under conditions of high differential pressure, the positive traction valve passes extra flow to the least restricted motor to prevent skidding. Under straight running conditions the differential pressure is low and equal amounts of flow are provided to each drive motor.

WARNING

For pressure over 210 bar (3000 psi) use steel housing.

FR5-8

Flow regulator, fixed

Description

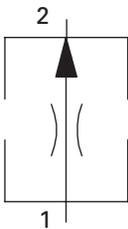

The FR5-8 is a fixed orifice, pressure compensated, restrictive flow regulator screw-in cartridge valve.

Operation

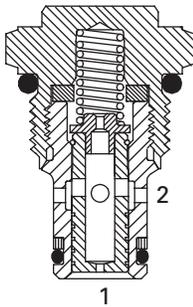

This valve maintains a constant flow from port 1 to port 2 based on 5.5 bar (80 psid) regardless of pressure changes downstream on

port 2. Reverse flow from port 2 to port 1 is at the value of the fixed orifice and is non-pressure compensated.

Description

The FR2-10-F is a limited range adjustable*, pressure compensated, screw-in flow regulator cartridge valve.

*The flow adjustment is from the factory set maximum flow rate down to 50% of that factory set flow rate.

Functional Symbol

Sectional View

Operation

This valve maintains a constant flow from port 1 to port 2 based on the setting adjustment, regardless of pressure changes downstream on port 2. Reverse flow from port 2 to port 1 is at the value of the fixed orifice and is non-pressure compensated.

RATINGS AND SPECIFICATIONS

<i>Performance data is typical with fluid at 21,8 cSt (105 SUS) and 49°C (120°F)</i>	
Typical application pressure (all ports)	210 bar (3000 psi)
Cartridge fatigue pressure (infinite life)	210 bar (3000 psi)
Rated flow	38 L/min (10 USgpm)
Flow regulation accuracy	0,4–1,9 L/min (0.1–0.49 USgpm) ±20% 1,9–7,5 L/min (0.5–1.99 USgpm) ±15% 7,6–37,8 L/min (2.0–10.0 USgpm) ±10%
<small>Factory set maximum flow rate accuracy under standard test conditions and within the above ranges</small>	
Temperature range	–40° to 120°C (–40° to 248°F)
Cavity	C–10–2
Fluids	All general purpose hydraulic fluids such as: MIL–H–5606, SAE 10, SAE 20, etc.
Filtration	Cleanliness code 18/16/13
Standard housing materials	Aluminum
Weight cartridge only	0,22 kg (.48 lbs.)
Seal kits	565803 Buna-N 566086 Viton®

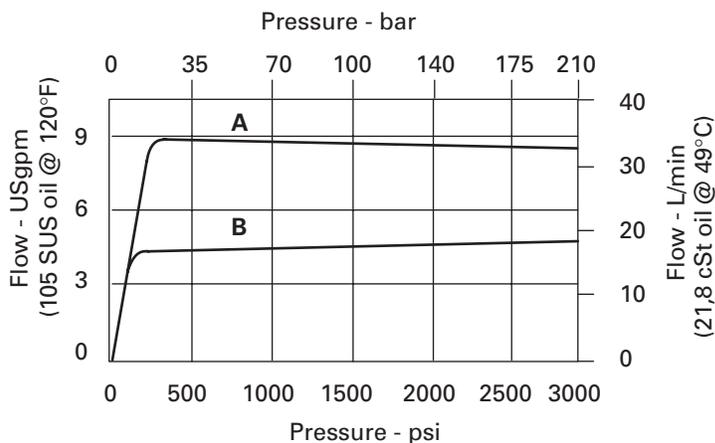

Viton is a registered trademark of E.I. DuPont

NOTE:

To reset scale and knob to an optimum viewing position:

1. Loosen the set screw
2. Rotate zero point on scale to a desired orientation.
3. Align mark on knob with zero on scale.
4. Tighten the set screw firmly.

To change the setting:

1. Loosen the set screw
2. Loosen jamnut while holding the knob steady, or move the knob along the axis slightly.
3. Turn adjusting screw (jamnut and knob will turn at the same time).
4. At the new adjusting screw position, tighten jamnut firmly while holding the knob steady, or move the knob along axis slightly.
5. Tighten the set screw firmly.

Aluminum housings can be used for pressures up to 210 bar (3000 psi)
Steel housings **must** be used for operating pressures **above** 210 bar (3000 psi)

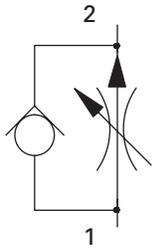

FAR1-12

Flow regulator, pressure compensated, fully adjustable

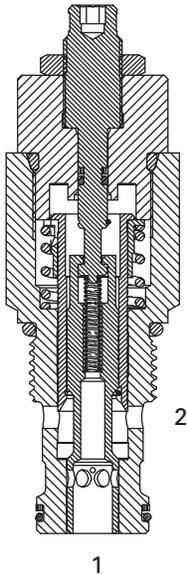

Description

The FAR1-12 is a two-way, **fully adjustable**, pressure compensated, flow regulator, screw-in cartridge valve with free reverse flow.

Functional Symbol

Sectional View

Operation

This valve maintains a constant flow from port 1 to port 2 regardless of pressure changes upstream of port 1, or downstream of port 2. 15,9 bar (230 psi) must be maintained across

the valve to obtain pressure compensated control. The regulated flow base within the adjusting range from 1,5 to 94,5 lpm (0.4 to 25 USgpm) is set by turning the adjusting screws

clockwise to decrease the flow and counter-clockwise to increase the flow. This valve allows free reverse flow from port 2 to port 1.

PFR5-8

Priority flow regulator, fixed

Description

The PFR5-8 is a fixed orifice, priority type, pressure compensated, flow regulator, screw-in cartridge valve.

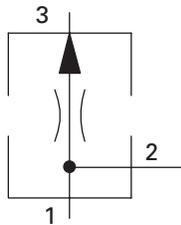

Operation

This valve maintains a constant, factory-set, priority flow from port 1 to port 3 based on 5.5 bar (80 psid) regardless of pressure

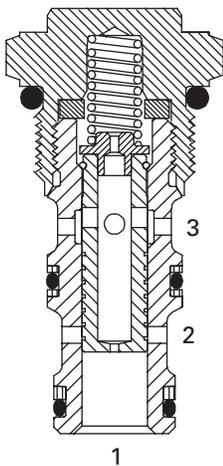

changes downstream on port 3. Flow in excess of the priority setting is directed to port 2. If the priority flow at port 3 is blocked,

the spool will shift to try and satisfy the priority flow requirement, thereby closing off flow to port 2.

00 – None
 (Only required if valve has special features, omitted if "00")

Dimensions

mm (inch)

Torque cartridge in housing

A – 47–54 Nm (35–40 ft.lbs)

S – 68–75 Nm (50–55 ft.lbs)

Aluminum housings can be used for pressures up to 210 bar (3000 psi)

Steel housings **must** be used for operating pressures **above** 210 bar (3000 psi)

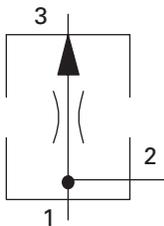

PFR1-16

Priority flow regulator, fixed

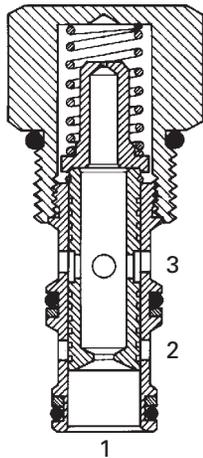

Description

The PFR1-16-F is a fixed orifice, priority type, pressure compensated, flow regulator screw-in cartridge valve.

Functional Symbol

Sectional View

Operation

This valve maintains a constant, factory-set, priority flow from port 1 to port 3 based on 5.5 bar (80 psid) regardless of pressure

changes downstream on port 3. Flow in excess of the priority setting is directed to port 2. If the priority flow at port 3 is blocked,

the spool will shift to satisfy the priority flow requirement, thereby closing off flow to port 2.

RATINGS AND SPECIFICATIONS

Performance data is typical with fluid at 21,8 cSt (105 SUS) and 49°C (120°F)

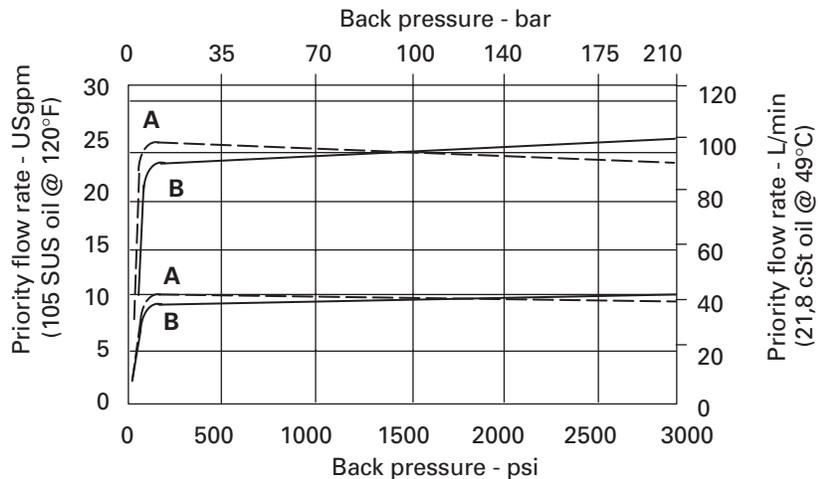

Typical application pressure (all ports)	210 bar (3000 psi)
Cartridge fatigue pressure (infinite life)	210 bar (3000 psi)
Rated flow	Maximum inlet flow 151 L/min (40 USgpm) Maximum regulated flow 114 L/min (30 USgpm)
Flow regulation accuracy	1,9–10,9 L/min (0,5–2,9 USgpm) ±15% 11,4–114 L/min (3–30 USgpm) ±10%
<small>Factory set maximum priority flow rate accuracy under standard test conditions and within the above ranges</small>	
Temperature range	-40° to 120°C (-40° to 248°F)
Cavity	C-16-3
Fluids	All general purpose hydraulic fluids such as: MIL-H-5606, SAE 10, SAE 20, etc.
Filtration	Cleanliness code 18/16/13
Standard housing materials	Aluminum
Weight cartridge only	0,38 kg (0.84 lb.)
Seal kits	565811 Buna-N 889610 Viton®

Viton is a registered trademark of E.I. DuPont

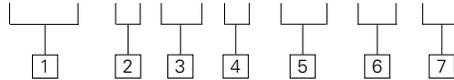

Typical Flow Regulation

Cartridge only

- A** – Port 3, priority (regulated outlet) pressurized.
- B** – Port 2, (bypass outlet) pressurized.

PFRD/S-12

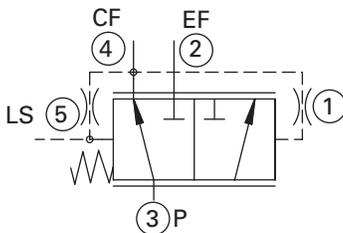

Priority flow regulator valve

Description

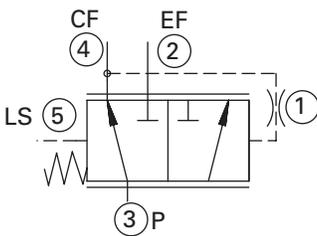

The PFR*-12 is a spool type, screw-in, load-sensing priority flow regulator cartridge valve.

Functional Symbols

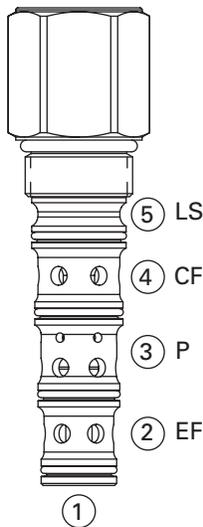

Dynamic Signal (PFRD)

Static Signal (PFRS)

Profile View

Note
Port 1 unused, port should be plugged.

Operation

This valve is used in the flow control mode. Pump flow from the valve inlet port 3 is delivered first to port 4 at a fixed rate; excess flow is bypassed to port 2. The valve maintains the controlled flow to 4 regardless of inlet pressure change or load pressure changes at 2 or 4. This valve is typically used with open loop load sense systems in steering and braking circuits. The static type

is used for less difficult applications where response or circuit stability is not a problem. The dynamic type is used for difficult applications where response or circuit stability are critical. The load sense line connected to port 5 should not exceed 2 Meters (6 Feet) in length. Overpressure protection for the circuits connected to ports 2 and 4 must be provided by external relief

valves. The control pressure is determined by assuring adequate inlet pressure to the steering unit and must be matched to the steering unit's required flow. The control pressure must be supplied to the valve as a minimum inlet pressure. The pressure at port 4 can vary by 10% when the load at the excess flow port 2 varies from 0 to maximum pressure.

RATINGS AND SPECIFICATIONS

Performance data is typical with fluid at 21,8 cSt (105 SUS) and 49°C (120°F)

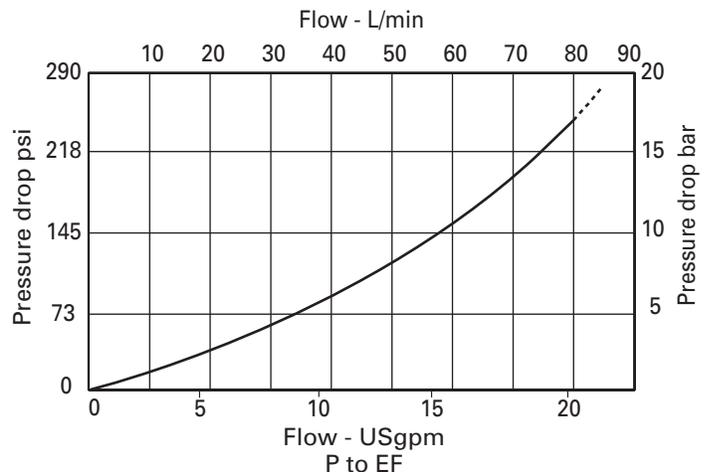

Typical application pressure (all ports)	280 bar (4000 psi)
Cartridge fatigue pressure (infinite life)	280 bar (4000 psi)
Rated inlet flow	76 L/min (20 USgpm)
Temperature range	-40° to 120°C (-40° to 248°F)
Cavity	C-12-5S
Fluids	All general purpose hydraulic fluids such as: MIL-H-5606, SAE 10, SAE 20, etc.
Filtration	Cleanliness code 18/16/13
Housing materials	Aluminum or Steel
Weight cartridge only	0,36 kg (0.79 lb.)
Seal kit	202914-921
Internal leakage	164cc/min (10 in ³ /min) @ 3000 PSID
Recommended L/S orifice	0.031" (not included in valve)

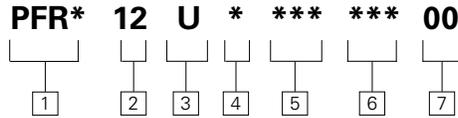

Pressure Drop Curves

Cartridge only

Notes
Minimum inlet flow should not be less than 1/4 of maximum inlet flow.

Minimum pressure drop is determined by control pressure.

The MRV2-16 is a 2-way, 2 position, manual semi-rotary screw-in flow restrictor valve.

Operation

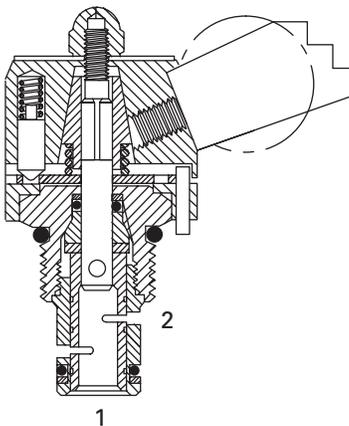

This valve will increase or decrease flow by changing the variable orifice with the rotary adjustment.

Recommended flow path is 2 to 1.

FCV7-10

Flow control valve

Description

The FCV7-10 is a non-pressure compensated, adjustable, flow restrictor available with and without free-flow check.

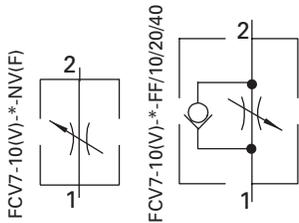

Operation

This valve when applied without the free flow check will allow flow between ports 1 and 2 through an increasing variable orifice when the adjustment is

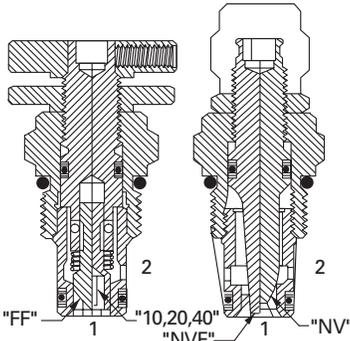

turned counterclockwise. In the full clockwise position this valve provides tight shut-off. When applied with the free flow check, the valve will work as stated

above allowing flow between port 2 and port 1, while it allows free reverse from port 1 to port 2.

Velocity fuse

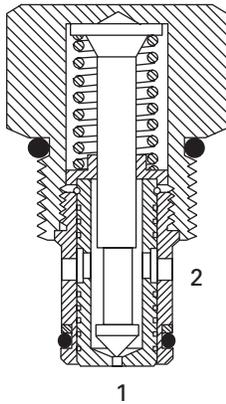

Description

The VF1-16-F is a factory-set, screw-in cartridge velocity fuse.

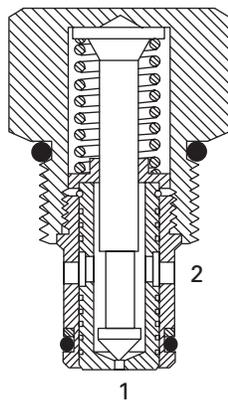

Operation

This valve is normally open from port 1 to port 2. When flow exceeds the setting of the valve, it closes. The valve returns to the open condition when the pressure at port 1 is reduced to less than 80 psi.

Functional Symbol

Sectional View

Application Note

The valve is not intended for use in pump unloading applications.

RATINGS AND SPECIFICATIONS

Performance data is typical with fluid at 21,8 cSt (105 SUS) and 49°C (120°F)

Typical application pressure (all ports)	210 bar (3000 psi)
Cartridge fatigue pressure (infinite life)	210 bar (3000 psi)
Rated flow	114 L/min (30 USgpm)
Flow regulation accuracy	9,5–114 L/min (2.5–30.0 USgpm) ±20%
	Factory set maximum flow rate accuracy under standard test conditions and within the above ranges
Internal leakage	Port 1 to 2 closed; <5 drops/min maximum @ 210 bar (3000 psi)
Temperature range	-40° to 120°C (-40° to 248°F)
Cavity	C-16-2
Fluids	All general purpose hydraulic fluids such as: MIL-H-5606, SAE 10, SAE 20, etc.
Filtration	Cleanliness code 18/16/13
Standard housing materials	Aluminum
Weight cartridge only	0,33 kg (0.72 lbs.)
Seal kits	565810 Buna-N 889609 Viton®

Viton is a registered trademark of E.I. DuPont

Typical Flow Regulation

Cartridge only

A -114 L/min (30 USgpm) maximum flow setting

— Port 1 to 2, fusing direction

--- Port 2 to 1, reverse flow down to 0

B -60 L/min (15 USgpm) maximum flow setting

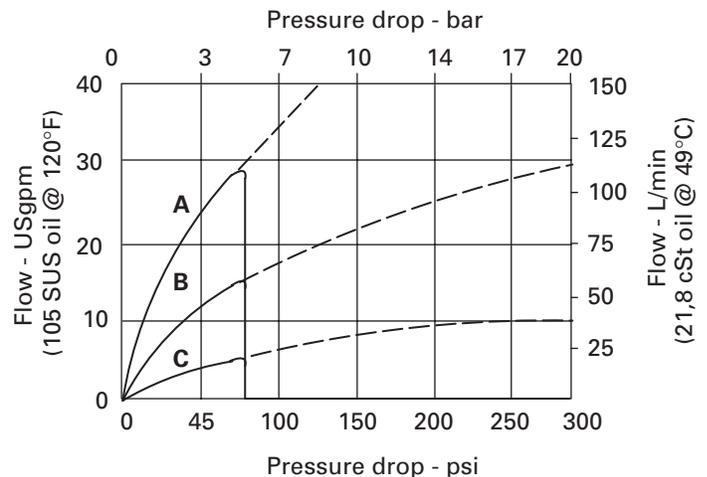

— Port 1 to 2, fusing direction

--- Port 2 to 1, reverse flow down to 0

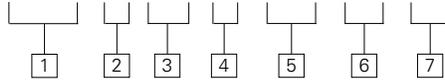

C -19 L/min (5 USgpm) maximum flow setting

— Port 1 to 2, fusing direction

--- Port 2 to 1, reverse flow down to 0

FDC1-10

Flow divider/combiner

Description

The FDC1-10 is a pressure compensated, spool type, screw-in, flow divider/combiner cartridge.

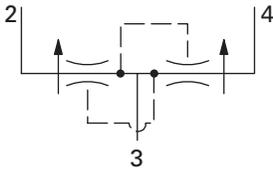

Operation

This valve is used in the dividing mode. It will take the inlet flow (port 3) and split the flow according to the ratio specified,

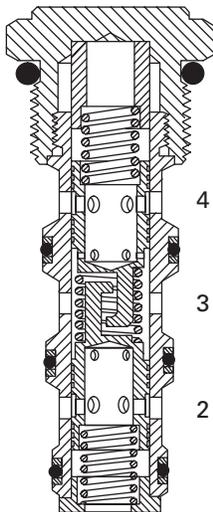

regardless of system pressure to ports 2 and 4.
In the combining mode this valve will take the inlet

flows from ports 2 and 4 and combine them into port 3 according to the ratio specified.
