# Proportional Directional Valves with Feedback

## K(B)FD/TG4V-5, 1\*/2\* Series

Pressures to 315 bar (4500 psi)

# Introduction

## General Description

Vickers proportional valves shown in this catalog are designed to provide a controlled oil flow in direct proportion to a command signal. They are available in two types; a double solenoid version that will provide reversible flow to an actuator and a single solenoid throttle version that provides a single direction of flow. Hydrostats are available for load compensation and parallel flow path modules are available that will boost the flow capacity of single solenoid throttle versions to nearly twice that of the standard valve.

Additionally, both of these valve types can be supplied with or without an integral amplifier built directly onto the valve.

### KFD/TG4V-5

This version is supplied *without* the integral amplifier.

#### Features and Benefits

- Wide range of spool and flow rate options.
- Electronic feedback LVDT ensures accurate spool position control.
- Internal current feedback provides optimal control.

- Vibration and shock tested.
- Supported by a broad range of amplifiers and auxiliary function modules.
- Full CE electromagnetic compatibility.

### KBFD/TG4V-5

A range of proportional directional and throttle valves *with* integral control electronics. Factory-set adjustments of gain, spool deadband compensation and offset ensure consistent repeatability valve-to-valve.

The only electrical inputs required are power supply (24V) and a voltage command signal of  $\pm 10V$ . The amplifier is housed in a robust metal enclosure, sealed against ingress of water and other fluids. Electrical connections are via a standard 7-pin plug.

A spool position monitor pin allows the function of the valve to be electrically monitored. Ramp functions, if required, can be generated externally.

## Features and Benefits

- Factory-sealed adjustments ensure valve-to-valve reproducibility.
- Installation wiring reduced and simplified.
- Standard 7-pin connector.
- Standard 24V DC supply with wide tolerance band.
- Standard  $\pm 10 V$  DC command signals.
- Valve with integrated amplifier selected, ordered, delivered and installed as one performance-tested package.
- Spool position monitor pin to help with troubleshooting.
- Simple valve removal and replacement for service (plug & play).
- Vibration and shock tested.
- Auxiliary DIN rail mounted electronic function modules available.
- Full CE electromagnetic compatibility.
- IP67 valve environmental protection rating.
- Optional valve enable function.

# Model Codes

**1 Valve type**

K – Proportional valve

**2 Integral amplifier**

B – Integral amplifier “B” series  
Omit for models *without* integral amplifier

**3 Feedback arrangement**

F – Spool position

**4 Control type**

D - Directional valve  
T - Throttle valve

**5 Mounting**

G – Subplate mounted

**6 Operation**

4 – Solenoid operated

**7 Pressure rating**

V – 315 bar (4500 psi) on ports P,A, & B

**8 Interface**

5 – ISO 4401, size 05-04-0-94  
ANSI/B93.7M-Size 05

**9 Spool type (center condition) (see spool data, page 5)**

2 – Closed center (all ports)  
33 – P port closed, bleed A & B to T

**10 Spool/spring arrangement**

B – Spring centered single solenoid valve (solenoid “B” only) Solenoid “A” for “V” version  
C – Spring centered, dual solenoid

**11 Spool flow rating**

$\Delta p = 5$  bar (75 psi) per metering flow path, e.g. B to T For actual maximum flow refer to power capacity envelope curves page 8).

30 – 30 L/min (7.9 USgpm) ▲  
50 – 50 L/min (13.2 USgpm) ▲  
65 – 65 L/min (17.2 USgpm) □  
70 – 70 L/min (18.5 USgpm) ▲■  
▲ Meter-in/meter-out  
□ Meter-out only  
▲ ■ Type-2 spool only

**12 Spool metering type**

N – Meter-in and meter-out  
S – Meter-out only

**13 Flow rating (“B” port flow for asymmetric spools) K(B)FDG valves only**

25 – 25 L/min (6.6 USgpm)  
(50N25 only)

Omit for symmetrical spool

**14 Manual overrides**

Z – No manual overrides

**15 Solenoid energization identity**

(non-integral amplifier types only, omit for valves with integral amplifier)

V – Solenoid “A” is at port “A” end and Solenoid “B” is at port “B” end independent of spool type  
Blank US ANSI B93.9 standard (energize solenoid “A”, flow symbol is  $\langle P \rightarrow A \rangle$ )

**16 LVDT plug**

(omit for valves with integral amplifier)  
M – Standard LVDT (mating plug supplied)

**17 Solenoid connector**

(omit for valves with integral amplifier)  
U1 – ISO 4400/DIN 43650, non-integral amplifier type only (mating plug supplied)

**18 Electrical connection (KBF valves only)**

PC7 – 7 pin connector without plug  
PE7 – 7 pin electrical plug with mating half  
PH7 – As PE7 but with pin “C” used for enable signal  
PR7 – As PC7 but with pin “C” used for enable signal

**19 Coil rating**

H – 24 VDC amplifier supply

**20 Port T pressure limit code**

6 – for 2C\*\*S spools  
7 – for all other spools

**21 Design number**

1\* and 2\* series. Subject to change

**Warning**

Valves with integral amplifiers are supplied with or without the metal 7-pin plug. The Vickers plug, part no. 934939, must be correctly fitted to ensure that the EMC rating and IP67 rating are achieved. The plug retaining nut must be tightened with a torque of 2-2,5 Nm (1.5-2.0 lbf ft) to effect a proper seal.

# Spool Data

## Spool Symbols

### Available Spools for K(B)FDG4V-5

Spool type 2C\*\*N, meter-in/meter-out

Spool type 2C50N25, assymmetric flow

Spool Type 2C65S, meter-out only

Spool type 33C\*\*N, meter-in/meter-out

Spool type 33C50N25, assymmetric flow

### Available Spools for K(B)FTG4V-5

Spool type 2B\*\*N, meter-in/meter-out

## Spool Types and Flow Ratings

### Symmetric Spools

Base line starting at  $\Delta p = 5$  bar (75 psi) per metering flow path, e.g. B to T. For actual maximum flow refer to power capacity envelope curves.

Spool code	Spool symbol	Flow rating
For K(B)FDG4V-5 valves:		
2C30N	2C	30 L/min (7.9 USgpm)
2C50N	2C	50 L/min (13.2 USgpm)
2C65S	2C	65 L/min (17.2 USgpm)
2C70N	2C	70 L/min (18.5 USgpm)
33C30N	33C	30 L/min (7.9 USgpm)
33C50N	33C	50 L/min (13.2 USgpm)
For K(B)FTG4V-5 valves:		
2B30N	2B	30 L/min (7.9 USgpm)
2B50N	2B	50 L/min (13.2 USgpm)
2B70N	2B	70 L/min (18.5 USgpm)

### Asymmetric Spools

Figure preceding metering type designator, "N" (e.g. 2C\*\*\*N) is flow rating P-A, or A-T ("A" port flow); figure after "N" (N\*\*\*) is flow rating P-B, or B-T ("B" port flow).

Spool code	Spool symbol	Flow rating
For K(B)FDG4V-5 valves:		
2C50N25	2C	50 L/min (13.2 USgpm), "A" port flow 25 L/min (6.6 USgpm), "B" port flow
33C50N25	33C	50 L/min (13.2 USgpm), "A" port flow 25 L/min (6.6 USgpm), "B" port flow

## Functional Symbols

### Model Types KBFDG4V-5

proportional directional valve (with integrated electronics)

### Model Types KFDG4V-5

proportional directional valve (requires amplifier card)

### Model Types KBFTG4V-5

proportional throttle valve (with integrated electronics)

### Model Types KFTG4V-5

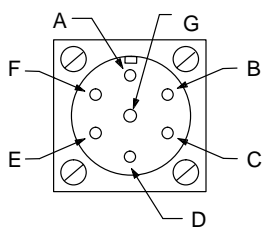

proportional throttle valve (requires amplifier card)

# Operating Data

## Valves w/ integral amplifier

**KBFD/TG4V-5 Valves with integral amplifier** Data is typical with fluid at 36 cSt (168 SUS) and 50°C (122°F).

Power supply	24V DC (21V to 36V including 10% peak-to-peak max. ripple) max current 3A																		
Command signal Input impedance Common mode voltage to pin B	0 to +10V DC, or 0 to -10V DC, or -10 V to +10 V DC 47 kΩ 18V (max)																		
Valve enable signal for model codes PH7 & PR7 Enable Disable Input impedance	>8.5V (36V max) <6.5V 10 kΩ

G	Protective ground																		
Electromagnetic compatibility (EMC): Emission (10 V/m) Immunity (10 V/m)	EN 50081-2 EN 50082-2																		
Threshold command voltage (minimum voltage for minimum flow)	0.25V																		
Monitor signal (pin F)      KBFD valves KBFT valves Output impedance	± 10V DC for full spool stroke 0 to -10V DC for full spool stroke 10kΩ																		
Power stage PWM frequency	10 kHz nominal																		
Step input response with flow through P-A-B-T Δp=5 bar (75psi) per metering path, e.g. P-A Required flow step: 0-100% 100% - 0 +90 - -90% (KBFDG4V-5 only)	Time to reach 90% of required step: 28 ms 28 ms 35 ms																		
Reproducibility, valve-to-valve (at factory settings): Flow at 100% command signal	≤ 5%																		
Protection: Electrical Environmental	Reverse polarity protected IEC 144, Class IP67																		
Ambient air temperature range for full performance Oil temperature range for full performance	0° C to 70° C (32° F to 158° F) 0° C to 70° C (32° F to 158° F)																		
Minimum temperature at which valves will work at reduced performance	-20° C (-4° F)																		
Storage temperature range	-25° C to +85° C (-13° F to +185° F)																		
Supporting products: Auxiliary electronic modules (DIN -rail mounting): EHA-CON-201-A2* signal converter EHD-DSG-201-A-1* command signal generator EHA-RMP-201-A-2* Ramp generator EHA-PSU-201-A-10 Power supply EHA-PID-201-A-20 PID controller	See catalog GB 2410A See catalog GB 2470 See catalog GB 2410A See catalog GB 2410A See catalog GB 2427																		

# Operating Data

## Valves w/o integral amplifier

### KFD/TG4V-5 Valves without integral amplifier (requires a Eurocard amplifier, refer to Supporting Products)

Data is typical with fluid at 36 cSt (168 SUS) and 50°C (122°F).

Max current, at 50° C (122° F) ambient	2,7 A
Coil resistance, at 20° C (68° F)	2,80Ω
Step response: Step size (% of max spool stroke): 0 to 100% 100% to 0 +90 to -90% (KFDG4V-5 only)	Time to reach 90% of required step: 31 ms 30 ms 45 ms
Type of protection, with electrical plugs fitted correctly	IEC 144, Class IP67
Electromagnetic compatibility (EMC) Emission (10V/m) Immunity (10V/m)	EN 50081-2 EN 50082-2
Maximum allowable ambient air temperature	60° C (140° F)
Maximum allowable oil temperature	60° C (140° F)
Supporting products: Eurocard amplifiers EEA PAM 535 A/B/C/D/E/F	See catalog GB 2464

### KFD/TG4V-5 and KBFD/TG4V-5 Valves (all valves)

Relative duty factor	Continuous rating (ED = 100%)
Hysteresis with flow through P-A-B-T	< 1% of max stroke (center-to-offset)
Mass: KFDG4V-5 KBFDG4V-5 KFTG4V-5 KBFTG4V-5	7,2 kg (15.86 lb) approx. 7,6 kg (16.76 lb) approx. 5,5 kg (12.10 lb) approx. 5,9 kg (13.00 lb) approx.
Portable test equipment EHA TEQ 700 A 20 EBA TEQ 706 A 10	See catalog GB 2462 See catalog GB 2315

## Pressures and Flow Rates

### Maximum pressures, bar (psi)

Model	Port L condition	Ports P, A, B	T	L
All models for normal usage (L port not connected)	Normally blocked by mounting surface	315 (4500)	160 (2300)	160 (2300)
For K(B)FDG4V-5-**C**N-Z models only, a higher "T" port pressure is allowed if the "L" port is connected directly to tank	Drained directly to tank	315 (4500)	210 (3000)	10 (150)

# Performance Curves

## Power Capacity Envelopes

Single solenoid models:  
**K(B)FTG4V-5**  
 Spool types as noted

Subject to maximum pressure limitations according to model type.  
 See "Maximum Pressures" on page 7.

**Looped Flow Path**

**Single Flow Path**

**Parallel Flow Path use**

parallel flow path module:  
 KDGMA-5-616877-10R or  
 KDGMA-5-02-139150-10S  
 (see page 16)

## Double Solenoid Models:

**K(B)FDG4V-5**  
 Spool types as noted

**Single Flow Path**

**Looped Flow Path**

# Performance Curves

## Flow Gain

### K(B)FD/TG4V-5

Spool types as noted

Single flowpath (e.g. P-A) pressure drop,  $\Delta p = 5$  bar (75 psi) ■.

When using the single solenoid throttle valve (K\*FT), a dual flowpath module (page 16) can be used to approximately double the flow rate.

Curves shown include deadband compensation provided for the KF valve by the Vickers Eurocard Amplifier EEA-PAM-535-\*32 (user adjustable).

KB valves are preset at the factory to compensate for the effect of spool overlap.

■ At other  $\Delta p$  values and within the power capacity envelopes, flow rates approximate to:

$$Q_x = Q_d \sqrt{\frac{\Delta p_x}{\Delta p_d}}$$

where  $Q_d$  = Datum flow rate  
 $\Delta p_d$  = Pressure drop at datum flow rate  
 $\Delta p_x$  = Required  $\Delta p$

## Frequency Response (Typical)

For an amplitude of  $\pm 25\%$  max. stroke about the 50% position, at  $\Delta p$  (P-B) = 5 bar (75 psi)

**KBFD/TG4V-5**

**KFD/TG4V-5**

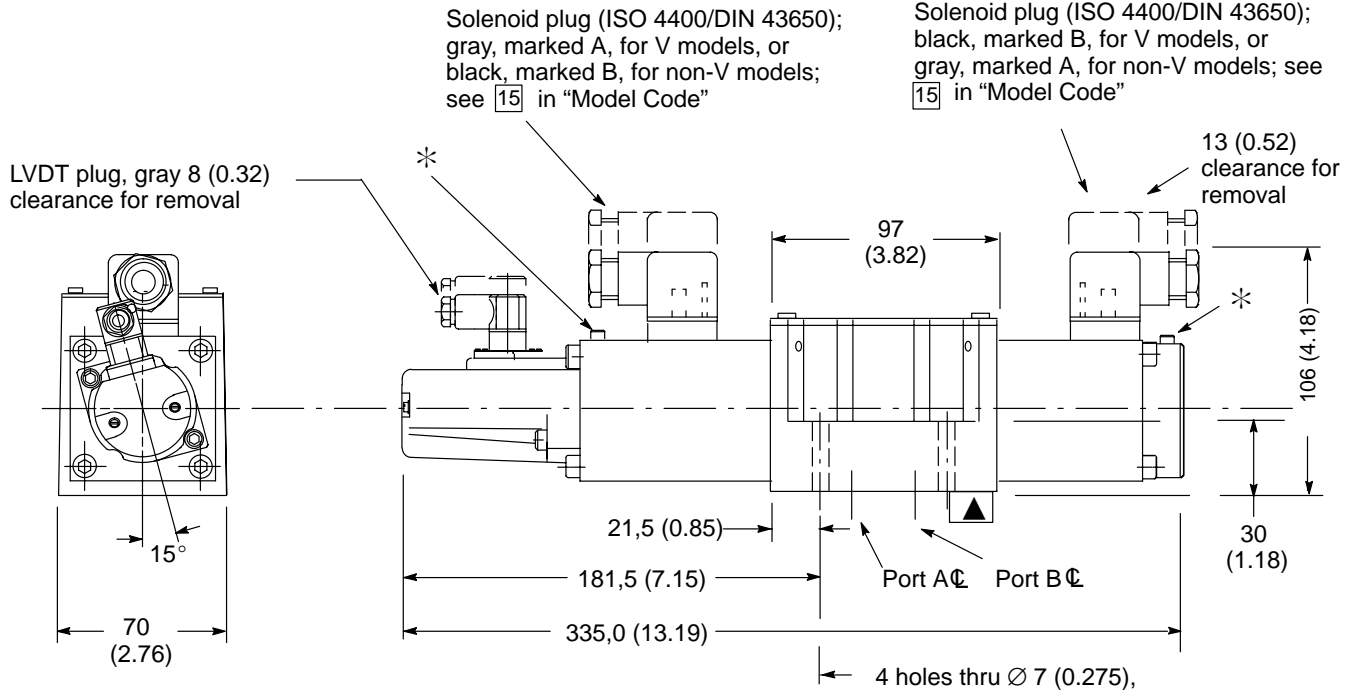

# Installation Dimensions

## KFDG4V-5

mm (inch)

3rd angle projection

## KFTG4V-5

\*Note: Bleed screw locations *Air bleed, Socket Head Cap Screw. Torque to 2,5-3,0 Nm (2.0-2.5 lbf ft)*

**NOTE:** For optimum valve operation, bleed the air from the proportional solenoids at initial start-up. This may be done as follows:

- The valve may be pressurized by removing the bleed screws until no bubbles appear and then reinstalling bleed screws, or...
- Remove both bleed screws, and use a standard oil can nozzle to pump fluid in one side until it flows, free of air bubbles, out the other side. Reinstall screws.

If there is no inherent back pressure in the tank port of the circuit do not allow the tank line to empty. This may be prevented by installing a check valve in the tank line. The cracking pressure of the check valve should be in the range of 22 - 45 psi (1.5 - 3 bar).

**KBFDG4V-5**  
mm (inch)

**KBFTG4V-5**

**Warning**

Valves with integral amplifiers are supplied with or without the metal 7-pin plug. The Vickers plug, part no. 934939, must be correctly fitted to ensure that the EMC rating and IP67 rating are achieved. The plug retaining nut must be tightened with a torque of 2,0-2,5 Nm (1.5-2.0 lbf ft) to effect a proper seal.

\*Note: Bleed screw locations *Air bleed, Socket Head Cap Screw. Torque to 2,5-3,0 Nm (2.0-2.5 lbf ft)*

▲ Mounting surface seals supplied. For Mounting surface dimensions and sub-plate options see page 12, Subplates and mounting surfaces.

# Subplates and Mounting Surfaces

## General Description

When a subplate is not used, a machined pad must be provided for valve mounting. Pad must be flat within 0,0127 mm (.0005 inch) and smooth within 1,6 μm (63 microinch). Mounting bolts, when provided by customer, should be ISO 898 class 12.9 or better.

## Dimensional Tolerances

Dimensional tolerance on interface drawings is  $\pm 0,2$  mm ( $\pm 0.008$ " ) except where otherwise stated. ISO 4401 specifies inch conversion to  $\pm 0.01$ ".

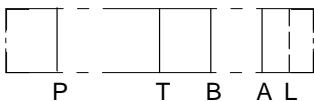

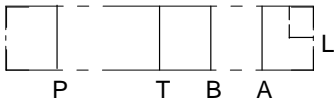

## Conversion from Metric

ISO 4401 gives dimensions in mm. Inch conversions are accurate to 0.01" unless otherwise stated.

## Mounting Bolt Tappings

ISO 4401 gives metric thread tappings. Alternate UNC tappings are Vickers recommendations that allow these plates and associated valves to be used up to their maximum pressures, when using Vickers recommended bolt kits, or bolts of an equivalent strength. It is recommended that Customer's own manifold blocks for UNC bolts should be tapped to the minimum depths given in the footnotes.

## Subplates

Description and Mass kg (lb)	Functional Symbol	Model Code	Max. Pressure
Single-station subplate; rear ports P, T, A, B; and port L (side or rear) Cast iron 1,3 (2.9)		KDGSM-5-67805-20 (SAE/UNF ports)	210 bar (3000 psi)
		KDGSM-5-615225-10 1/2" BSPF ports	315 bar (4500 psi)
		KDGSM-5-615226-10 3/4" BSPF ports

<b>280 bar (4000 psi)</b> EKD GSM-01Y-10-R	G 1/2 (1/2" BSPF) X 15,0 (0.59) full thread depth

### Dimensions

Model	C	E	F	G	H	J	K	M	N	W
<b>210 bar (3000 psi)</b> KD GSM-5-676805-2*	45,2 (1.78)	42,1 (1.66)	19,0 (0.75)	68,3 (2.69)	45,2 (1.78)	23,8 (0.94)	42,1 (1.7)	31,8 (1.25)	23,9 (0.94)	57,1 (2.25)
<b>280 bar (4000 psi)</b> EKD GSM-01Y-1*-R	39,7 (1.56)	40,5 (1.59)	9,9 (0.39)	70,6 (2.78)	39,7 (1.56)	10,7 (0.42)	40,5 (1.59)	36,5 (1.44)	28,6 (1.13)	72,6 (2.86)

**Subplates with Rear Ports P, T, A, B, L**

**Maximum Pressure 315 bar (4500 psi)**

Model types: KD GSM-5-615225-1\*

KD GSM-5-615226-1\*

All dimensions in mm (inches)

**Part Section A-A**

**Ports P, T, A, B**

Model	Y Thread	Z diameter
KD GSM-5-615225-10	G1/2 (1/2" BSPF) x 14,0 (0.55) full thread depth	30,0 (1.18)
KD GSM-5-615226-10	G3/4 (3/4" BSPF) X 16,0 (0.63) full thread depth	33,0 (1.30)

## Mounting Surfaces to ISO 4401 (Size 05)

This interface conforms to:  
 ISO 4401-05-04-0-94  
 ANSI/B93.7M (and NFPA) size 05  
 CETOP R35H4.2-05  
 DIN 24340 Form A10

## Interface with Additional Drain Port

The interface conforms to Vickers standard, plus hole "L"

Typically used for proportional and other valves requiring an additional drain port, e.g.:  
 K(B)FDG4V-5  
 K(B)FTG4V-5

# Parallel Path Flow Module

## Size 05 Parallel-Flow-Path Modules

KDGMA-5-616877-1\*-R

KDGMA-5-02-139150-1\*-S

Typically used for doubling effective flow capability of single solenoid proportional valves (throttle valves), as illustrated in "Typical Applications".

Do not remove this closure plug, or others in side faces

Supplied with port L plugged. Remove plug for external drain connection if required. (See table for tapping and socket A/F sizes)

▲ A,  $T_A$  and  $T_B$  ports at subplate face are blind holes fitted with O-seals.

Model	Port L thread	Socket wrench A/F for plug removal	Mass (approx.)
KDGMA-5-616877-1*-R	G1/4 (1/4" BSPF) x 11,0 (0.43) full thread depth	6,0 (0.23)	1,5 kg (3.3 lb)
KDGMA-5-02-139150-1*-S	9/16"-18 UNF x 12,7 (0.5) full thread depth	6,3 (0.25)	1,5 kg (3.3 lb)

### Max. Pressures and Flow Ratings

No functional limitations; dependent on valves used.

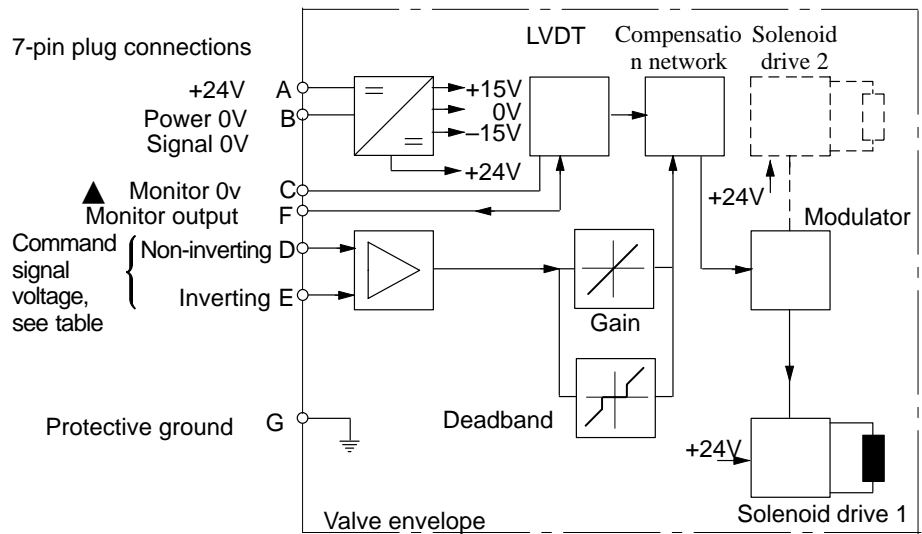

# Electrical Information

## Electrical Block Diagram

KBFDG4V-5 and KBFTG4V-5

Command Signals and Outputs

7-pin plug		Flow direction
Pin D	Pin E	
Positive	OV	P to A
OV	Negative	
$U_D - U_E =$ Positive		P to B
Negative	OV	
OV	Positive	
$U_D - U_E =$ Negative		

▲ Note: In valves with PH7 or PR7 type electrical connection, pin C is used for a valve enable signal

### Wiring

Connections must be made via the 7-pin plug mounted on the amplifier. See page 10 of this leaflet and Installation Wiring Practices for Vickers Electronic Products, leaflet 2468. Recommended cable sizes are:

#### Power cables:

For 24V supply  
 0,75 mm<sup>2</sup> (18 AWG) up to 20m (65 ft)  
 1,00 mm<sup>2</sup> (16 AWG) up to 40m (130 ft)

#### Signal cables:

0,50 mm<sup>2</sup> (20 AWG)

#### Screen (shield):

A suitable cable would have 7 cores, a separate screen for the signal wires and an overall screen.  
 Cable outside diameter 8,0–10,5 mm (0.31–0.41 inches)  
 See connection diagram on next page.

### KFDG4V-5 and KFTG4V-5

#### Wiring

Wiring details for these valves are contained in the appropriate Eurocard literature and the Installation Wiring Practices for Vickers Electronic Products leaflet 2468.

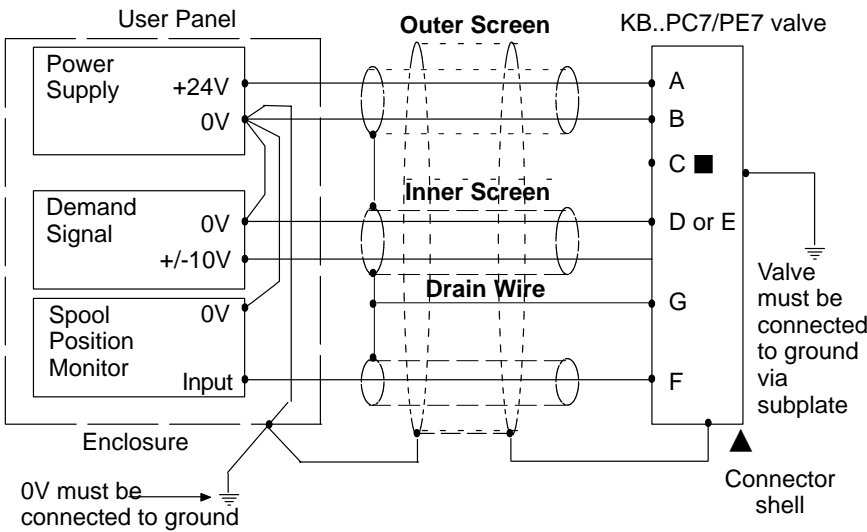

#### Warning

All power must be switched off before connecting or disconnecting any plugs.

# Typical Connection Arrangements

## Wiring Connections

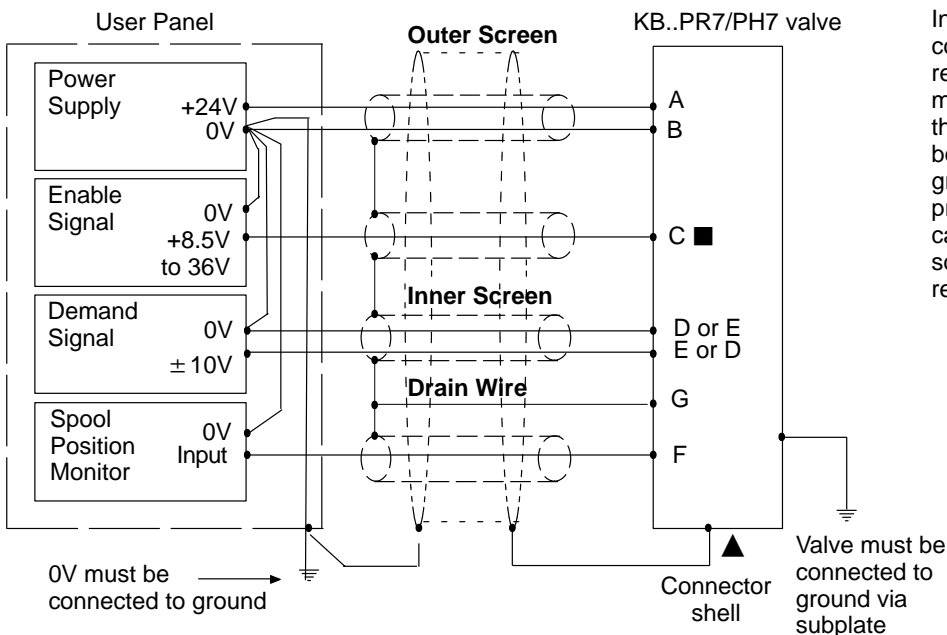

■ Spool position monitor voltage (pin F) will be referenced to the KB valve local ground. A "local ground" (pin C) is provided on PC7/PE7 versions for optional use by differential input customer supplied electronics.

### WARNING

**Do not ground pin C.** If the local ground (pin C) is not used for differential monitor electronics, do not use. Read monitor pin F with respect to ground.

## Wiring Connections for Valves with Enable Feature

### ▲ Note:

In applications where the valve must conform to European RFI/EMC regulations, the outer screen (shield) must be connected to the outer shell of the 7 pin connector, and the valve body must be fastened to the earth ground. Proper earth grounding practices must be observed in this case, as any differences in command source and valve ground potentials will result in a screen (shield) ground loop.

### Warning

#### Electromagnetic Compatibility (EMC)

It is necessary to ensure that the valve is wired up as above. For effective protection the user electrical cabinet, the valve subplate or manifold and the cable screens should be connected to efficient ground points. The metal 7 pin connector part no. 934939 should be used for the integral amplifier.

In all cases both valve and cable should be kept as far away as possible from any sources of electromagnetic radiation such as cables carrying heavy current, relays and certain kinds of portable radio transmitters, etc. Difficult environments could mean that extra screening may be necessary to avoid the interference.

It is important to connect the 0V lines as shown above. The multi-core cable should have at least two screens to separate the demand signal and monitor output from the power lines.

The enable line to pin C should be outside the screen which contains the demand signal cables.

## Fluid Cleanliness

Proper fluid condition is essential for long and satisfactory life of hydraulic components and systems. Hydraulic fluid must have the correct balance of cleanliness, materials and additives for protection against wear of components, elevated viscosity and inclusion of air.

Recommendations on contamination control methods and the selection of products to control fluid condition are included in Vickers publication 9132 or 561, "Vickers Guide to Systemic Contamination Control". The book also includes information on the Vickers concept of "ProActive Maintenance". The following recommendations are based on ISO cleanliness levels at 2 µm, 5 µm and 15 µm.

For products in this catalog the recommended levels are:

0 to 70 bar (1000 psi) . . . . . 18/16/13  
70 + bar (1000 + psi) . . . . . 17/15/12

Vickers products, as any components, will operate with apparent satisfaction in fluids with higher cleanliness codes than those described. Other manufacturers will often recommend levels above those specified.

Experience has shown, however, that life of any hydraulic components is shortened in fluids with higher cleanliness codes than those listed above. These codes have been proven to provide a long trouble-free service life for the products shown, regardless of the manufacturer.

## Hydraulic Fluids

Materials and seals used in these valves are compatible with antiwear hydraulic oils, and non-alkyl-based phosphate esters. The extreme operating viscosity range is 500 to 13 cSt (2270 to 70 SUS) but the recommended running range is 54 to 13 cSt (245 to 70 SUS). For further technical information about fluids see "Technical Information" leaflet B-920 or I-286S.

## Installation

The proportional valves in this catalog can be mounted in any attitude, but it may be necessary in certain demanding applications, to ensure that the solenoids are kept full of hydraulic fluid. Good installation practice dictates that the tank port and any drain port are piped so as to keep the valves full of fluid once the system start-up has been completed.

## Mounting Bolt Kits

### For K(B)FD/TG4V-5

BKDG01633M (metric)  
BK869705 (inch)

*If not using Vickers recommended bolt kits, bolts used should be to ISO 898, 12.9 or better.*

## Seal Kits

KFD/TG4V-5 . . . . . 565110  
KBFD/TG4V-5-1\* . . . . . 02-332751

## Plugs

KBFDG4V  
7-pin plug (metal) . . . . . 934939  
7-pin plug (plastic) . . . . . 694534  
(metal plug must be used for full EMC protection)

**NOTE:** An alternative metal connector which gives EMC protection but not IP67 rating is available from ITT-Cannon, part number CA06-COM-E-14S-A7-S.

KFDG4V  
Solenoid (black) . . . . . 710775  
Solenoid (gray) . . . . . 710776  
LVDT (gray) . . . . . 458939

## Extension Cable

**Extension Cable:** Adapter for extending 7 core cable when changing from KA to KB valve and existing wiring is not long enough. Consists of a 7 pin plug, a 7 pin socket and a length of cable, fully assembled for ease of use  
Extension Cable . . . . . 944450

## Service Information

The products from this range are preset at the factory for optimum performance; disassembling critical items would destroy these settings. It is therefore recommended that should any mechanical or electronic repair be necessary they should be returned to the nearest Vickers repair center. The products will be refurbished as necessary and retested to specification before return.

Field repair is restricted to the replacement of the seals.

*Note: The feedback/solenoid assembly installed in this valve should not be disassembled.*
